

THE CLASS

Our web development class covers **HTML**, **CSS** and **Javascript**, three different languages that are commonly found in websites and web applications.

Learn the skills to get a job in the web industry. As of 2016, a Stack Overflow survey found 56% of Developers did not have a degree.

REGISTER

THE CURRICULUM

In front of a hiring manager, a portfolio displaying your work and proven abilities will outweigh a degree from a university almost every time. Many four year programs don't even teach the latest technologies.

Our teachers are skilled developers and engineers with years of experience in the web industry. Our teacher curated curriculum includes many of the latest technologies that employers are currently looking for.

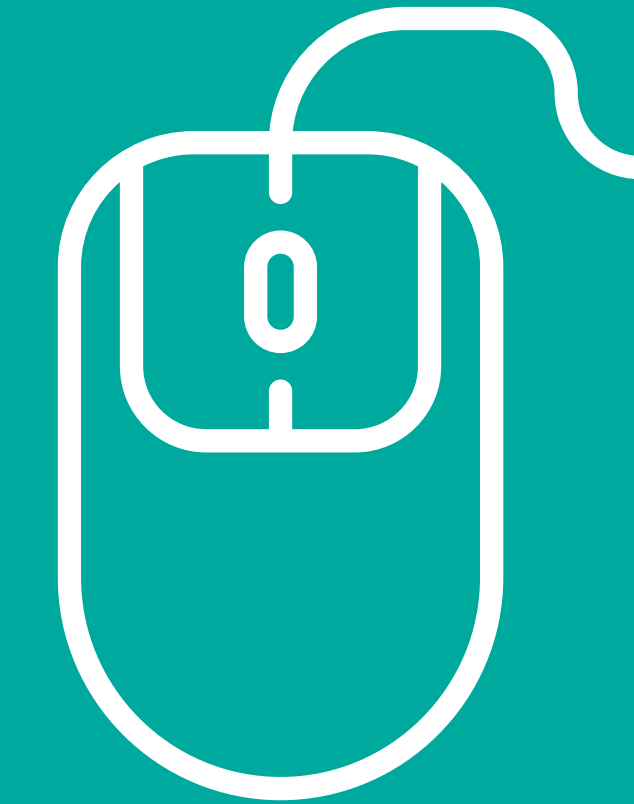

CURRICULUM SYLLABUS

THE GUARANTEE

We want every student to truly learn the material and eventually attain a job in the industry. We know everyone learns at different speeds and in different ways, this is why we offer our **Retake Guarantee**. We allow all students to continue to take our class as many times as necessary!

Once the class is completed we offer several services for graduates on our website, including job listings in the area and the ability to ask our teachers any technical related questions.

THE CAREER

The web industry is in need of coders and developers due to an untrained workforce, programming courses aren't taught in most primary schools in the United States.

The median income in for a web developer is \$60,000 and Web Development isn't the only position that will be available with the skills learned from this course.
